CARMUNICATION: Membership continues to grow, NEXUS joins as a full member

Following its dedication to community, innovation and entrepreneurship, NEXUS Automotive has decided to join CARMUNICATION and to design the digital future of repair and services together.

Vienna/Le Lignon – Geneva, 17 May 2018. – "The automotive industry is experiencing an enormous transformation coming from new digital technologies, and the access to vehicle data is one of the keys for developing innovative strategies to face the market", François Hostalier, Service Concepts Development Manager at NEXUS, commented this week. NEXUS therefore decided to become a member of CARMUNICATION.

About NEXUS:

NEXUS is a progressive automotive community composed of more than 115 members and 68 suppliers all over the world. NEXUS' ambition is to be a central player that builds this future, anticipating and being prepared for future changes and disruptions. Joining CARMUNICATION is a reflection of NEXUS' commitment to its partnership with progressive automotive manufacturers, distributors and players, while also working toward a strong value-oriented model, based on three pillars: community, innovation, entrepreneurship.

Joining forces, CARMUNICATION and NEXUS look forward to developing innovative solutions and services together.

About CARMUNICATION:

Non-profit association CARMUNICATION collects relevant vehicle data and makes them available to members on the CARMUNICATION platform. These data show e.g.: Are there any

problems with the vehicle? What is the handling performance like? When is the next service due?

Who benefits from CARMUNICATION? Auto Live Data are crucial for analysis and diagnosis, especially when problems arise, repairs need to be made, or if one needs to estimate the value of a vehicle. This is why the following parties have a legitimate interest in Auto Live Data: insurance companies and vehicle fleet operators, breakdown services, IT services, brand-name workshops, spare part manufacturers, vehicle manufacturers, diagnostic providers, but also public institutions.

CARMUNICATION helps them to secure their access to Auto Live Data. For more information, go to <http://carmunication.eu/auto-live-data-what-for>
