RECOMMANDATIONS / RECOMMENDATIONS

 Les étriers mécaniques de freins flottants sont commandés par un cylindre de frein à ressort ou à diaphragme pneumatique, prévus pour être utilisés sur les essieux avant et arrière des véhicules utilitaires et remorques pour des jantes de 17,5", 19,5" ou 22,5" en tant que freins de service, de secours et de stationnement.

Des disques de frein et plaquettes de frein en bon état sont nécessaires pour un bon comportement de conduite et de freinage, qui sont déterminants pour assurer la sécurité.

Le remplacement des plaquettes et disques de frein doit toujours être réalisé par essieu !

Réaliser les travaux de réparation uniquement avec les outils appropriés.

Toujours dérégler ou régler le frein manuellement à l'aide d'une clé adaptée et ne jamais utiliser d'outils électriques ou pneumatiques.

Les travaux de réparation doivent se conclure par un contrôle final sur le banc d'essai ou effectuer une conduite test avec des tests de freinage.

Veuillez-vous conformer aux manuel et recommandations de montage du constructeur.

 Mechanical floating calipers brakes are controlled by a spring brake cylinder or diaphragm tire intended for use on the front and rear axles of commercial vehicles and trailers for wheels 17.5 " , 19.5 " or 22.5 "as service brakes, emergency and parking .

Brake discs and brake pads in good condition are necessary for a good driving behavior and braking, which are critical for safety.

Replacement of brake pads and discs must always be done axle by axle.

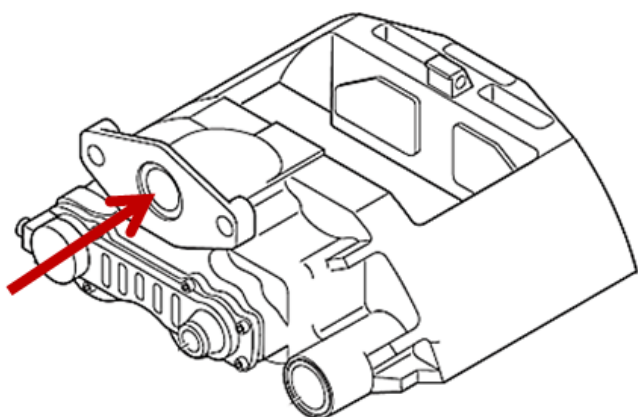

Perform repairs only with the proper tools.

Always disorder or adjust the brake manually using a suitable spanner and never use electric or pneumatic tools.

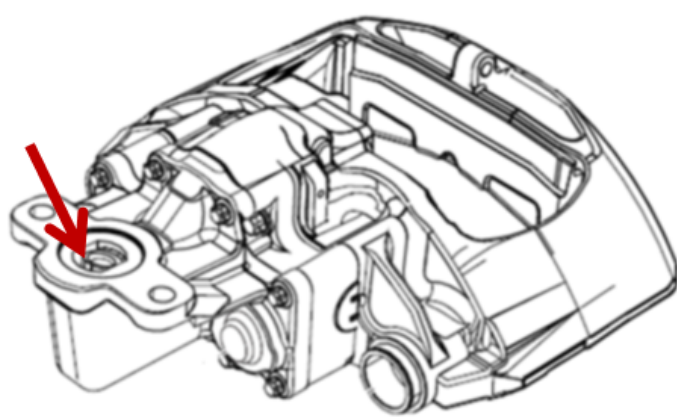

Repair work should conclude with a final check on the test bench, making a test conducted with braking tests.

Please refer to the manual's and the manufacturer's installation recommendation.
