| Speed Assistance Systems       | ●                                     |
| ALSO AVAILABLE ON              | Edge - Explorer - Focus - Kuga - Puma |

### Comments

Ford's system name **Co-Pilot 360** is inappropriate and indicates more functionality than the system is capable of. The promotional material and the handbook correctly indicate the limitations of the system capabilities. Status information is clear, and the Kuga offers a head-up display showing the system status in the driver's direct line of sight. Ford did not equip the Kuga with an internal camera and relies only on steering wheel input for Driver Monitoring. The system balances driver steering input with lane guidance, promoting co-operative driving.

Ford combines map-based speed limit information with real time camera inputs to manage fixed, variable and temporary speed limit signs. The system cannot adapt speed for upcoming road features such as curves and junctions. The Kuga responds to avoid a collision in most of the ACC test scenarios and requires AEB interventions in the more critical stopped vehicle, cut-in and cut-out tests. The driver is supported through the S-Bend, staying centred in the lane at all but the highest test speed. The vehicle has an Active Blindspot system designed to prevent lane changing into adjacent vehicles. A lane-change assist function is not available. In case of an unresponsive driver, the Ford performs a controlled stop in lane. If the radar or camera are blocked the Kuga provides a timely warning and prevents system activation.

**The Ford Kuga provides a good level of Vehicle Assistance with a similar level of Driver Engagement resulting in a good, balanced system.**
