

Nissens will be there with product novelties and exciting updates

Nissens Automotive is ready to meet customers and business partners at this year's special edition of Automechanika. Besides supporting the IAM reunion, Nissens also brings several exciting product news.

During this year's special hybrid version of Automechanika, the Danish thermal and efficiency solutions provider will disclose several product launches and essential updates within various product categories and vehicle segments. The aftermarket product solutions offered by Nissens are based upon thorough market analysis and are product concepts with excellent business potential at any level of the aftermarket.

Even stronger turbocharging, now also for trucks

One of the key product novelties is a brand-new turbo line designed for trucks. The program will initially cover 240 OE numbers of the most popular EU truck models. Nissens' successfully proven approach to turbo development has now transferred to the commercial vehicle segment, where the spare parts' quality, reliability, and performance are of even greater significance. The Genuine Nissens Quality concept ensures that a truck engine packed with Nissens' turbo is a reliable part replacement choice, and characterizes adequate power, emissions performance, and fuel consumption.

OE precision in turbocharging control

Besides the new heavy vehicles turbo line, the company will also present some technological updates in Nissens' turbo range with electrical actuators. These turbos are mainly applied in premium-segment vehicles and engines with advanced efficiency and emissions control and offer higher diagnostics capabilities and excellent control stability. Based on cooperation with experts within the electrification field, various e Actuator Nissens Turbo models are now equipped with OE-manufactured electric units. Several of the latest Nissens turbo models for Euro 5-6 engines are now available with actuators from the well-known German manufacturer Hella.

Meet Nissens to learn more about their novelties

There will be several options to meet with Nissens during the show. In-person at the company stand and simultaneously at Nissens' online sessions each day. The product novelties session will bring participants all the recent product news and the offered business potential. Nissens' Experts' tech talks will be technical sessions highlighting advanced systems and components operation.

Other novelties from Nissens:

- EGR valve modules equipped with a cooler and around twenty DC / Torque motor-driven models for Euro 5-6 motors.
- Expansion tanks for passenger cars and light commercial vehicles
- Oil coolers with housing – range extension

All Nissens parts are Genuine Nissens Quality products, designed with features improving the products' performance and durability, delivered with all extra mounting parts needed for proper installation.
