

1000 MIGLIA, ANOTHER STEP TOWARDS THE GOAL OF SUSTAINABILITY

BUREAU VERITAS ITALIA HAS VERIFIED THE COMPLIANCE OF THE CARBON FOOTPRINT OF 1000 MIGLIA SRL

Brescia, 28 February 2024 - The daring and innovative spirit has been in the DNA of the Red Arrow since the days of the speed race, which is why the 1000 Miglia could not shy away from tackling the challenges that contemporary times demand regarding **sustainable development**. This morning, the President of 1000 Miglia Srl, **Beatrice Saottini**, received from **Andrea Filippi**, Service Line Manager of the Certification Division of Bureau Veritas, the certificate of verification with regard to the **ISO 14064-1 standard**, which confirms the amount of Greenhouse Gas emissions of the company organising all the events of the Red Arrow.

Through the analysis of the company's carbon footprint, the total greenhouse gas emissions caused, directly or indirectly, by 1000 Miglia Srl during the year 2022 was determined. The calculation of the organisation's *carbon footprint* represents the extent, of the implementation of a **Carbon Management strategy** that includes emission reduction and offsetting actions.

Last year, the company began its sustainability journey with the calculation of the *carbon footprint* of the **Coppa delle Alpi 2023**. The project then continued with the offsetting of 100% of the GHG emissions caused by the event, through the purchase of internationally recognised carbon credits.

In 2024, the goal is to **identify a systematic method** that is replicable and usable on all of the organisation's events. Alongside this project, for the first time in history, is the calculation of the *carbon footprint* of the 1000 Miglia 2024.

"We are pleased to have taken another important step on our path towards sustainability," - says 1000 Miglia Srl President Beatrice Saottini, - "1000 Miglia has always looked to the future and progress, we will continue to set ourselves ambitious goals to become a model of a sustainable company."

"The robustness of the calculation criteria is at the basis of a serious carbon footprint, giving reliable indications with the aim of reducing emissions," - says Andrea Filippi, of Bureau Veritas Italia. "We are proud to contribute to the consolidation of the calculation methods of iconic organisations like 1000 Miglia, to demonstrate to the market the importance of referring to international standards."

Dichiarazione di verifica IT.328367-1 del 09.01.2024 relativa all'inventario dei GHG rilasciata da Bureau Veritas per l'anno solare 2022

Organizzazione con CFP Systematic Approach certificato da Bureau Veritas Italia Spa in conformità alla norma ISO 14067:2018
