The first photos of the DENZA Z9GT at the 1000 Miglia Green

For the first time, the luxury brand took part in the Italian and European motorsport classic, showcasing its values of sustainability, sportiness, and advanced technology

Last weekend, DENZA—a brand that unites luxury and sportiness—made its historic debut at the 1000 Miglia Green, starring in the 2025 edition of the race that epitomizes European and Italian motorsport.

For DENZA, the 1000 Miglia Green perfectly combines motorsport tradition with a vision for a sustainable future—and the Z9GT is the embodiment of this philosophy.

The DENZA Z9 GT crew consisted of driver Daniel Morelli and co-driver Matteo Ferraglio, both of whom are deeply familiar with this world-renowned race.

The legs of the 2025 1000 Miglia Green followed the race's traditional route, but with a focus on full-electric cars. The DENZA Z9 GT drew admiration throughout the itinerary, passing through Brescia, San Lazzaro di Savena (Bologna), Rome, Cervia, Parma, before returning to Brescia. The route traversed this part of Italy, highlighting its breathtaking landscapes and world-renowned cities of art and culture.

The images of the vehicle perfectly capture this new adventure, marking a significant milestone for the brand and its positioning.

The Z9GT is a Grand Tourer that redefines contemporary, sporty luxury travel. It will arrive in Italy in both PHEV and BEV versions starting at the end of 2025.

EXCLUSIVE FEATURES OF THE NEW DENZA Z9GT

Timeless design and State-of-the-art technology

The Z9GT is the purest expression of DENZA's stylistic language. The sculpted, dynamic front end exudes sportiness, while the sleek side proportions and large wheel sizes—in relation to the body—create a sense of balance and refinement, embodying the principles of the golden ratio.

The rear design is clean yet powerful, with pared-down forms and ascending lines that draw the eye upward, highlighting its elegance in motion. DENZA's 3D logo, positioned at the center of the front end, symbolizes the model's propulsive force, while functional components such as radar sensors, an active grille, and driver assistance systems have been discretely integrated.

The side profile is defined by a fluid, continuous beltline, while the rear reinforces the Z9GT's grand-tourer identity with full, muscular volumes that convey stability and presence on the road. Inspired

by the shape of an hourglass, the taillights establish visual continuity with the symmetrical design of the front end. Rounding out the exterior design are a one-piece floating rear spoiler that elegantly extends the roofline and a sophisticated pneumatic suspension system. These elements work in synergy to lower the suspension at high speeds, enhancing the aerodynamics and overall driving experience.

Plug-in Hybrid DM-i Engines

DM-i technology lies at the heart of the DENZA experience, powering a hybrid plug-in GT sports car that delivers 900 hp and offers an exclusive, cutting-edge take on luxury mobility. With sculpted lines, three motors, an impressive electric range for urban driving, and maximum comfort, the Z9GT DM-i represents the most advanced expression of high-end travel.

About DENZA

DENZA is the premium design- and technology-led mobility brand from BYD Group. It successfully mixes European-influenced sophisticated design with state-of-the-art platforms and technologies, delivering many unique features to the premium car market. The brand was founded in 2010 as a partnership between BYD and Daimler, and launched its first vehicle in 2014. It is being introduced to the European market during 2025, with an initial line-up of three models, led by the sophisticated, high-tech Z9GT.
